ABSTRACT

Wind tunnel tests of the 0.045-scale Apollo force model FS-3 were conducted in tunnels B and C of the Arnold Engineering Development Center's von Karman Gas Dynamics facility at Mach numbers 8.0 and 10.0. Models and tunnel installations are described, and tunnel operating conditions are discussed. Force and moment data are presented in both tabular and plotted form.

I. INTRODUCTION

Apollo force model FS-3 was tested in the AEDC von Karman Gas Dynamics Facility tunnels B and C during the period 30 July to 9 September 1962 to investigate the basic aerodynamic characteristics of the command module at Mach numbers 8.0 and 10.0 and Reynolds numbers 0.6×10^6 to 1.6×10^6 .

Data were initially taken using the NAA straight sting; after examination, the data were found to be unacceptable. The data reduction seemed to be correct, and at the time the discrepancies appeared to be due to sting interference. The test was subsequently, rerun with the AEDC-VKF bent stings and only three command modules, but the final data had the same discrepancies. The complete data reduction procedure was reviewed, and the tares were found incorrect. After again reducing the data with new tares, the bent sting data and the straight sting data were compared. The straight sting data were found to be in better agreement with other test data. To prevent confusion, only the straight sting data have been presented in this report. The bent sting data are available on request.

Pretest information for this test is contained in SID 62-709.¹

II. MODEL DESCRIPTION

Ten 0.045-scale models of the Apollo command module were employed to obtain an angle-of-attack range of -10 to +190 degrees with the NAA straight sting. Using the VKF bent sting and three command modules, an angle-of-attack range of -8 to +206 degrees was obtained. These command modules are identical except for the angle between the centerline of the balance cavity and the module axis of symmetry.

The C₂ test configuration is shown in Figure 1 with the location of the reference center of gravity.

The model was designed and fabricated by North American Aviation, Inc., and is detailed completely on drawing NAA 7121-01063. Figure 2 shows the model parts. The tunnel B straight sting installation is shown in Figure 3, and the tunnel B bent sting installation is shown in Figure 4.

Shadowgraphs were made during the test but were of such poor quality they could not be reproduced.

III. INSTRUMENTATION

FORCE MEASUREMENT

Force and moment data were measured with the VKF water-cooled A-11 balance for the straight sting portion of the test and with the VKF water-cooled B-6 balance for the bent sting (Figures 3 and 4). Three balance calibrations were used to increase the accuracy of the measurements over the complete angle-of-attack range by using a half-rated calibration for small loads and a full-rated calibration for larger loads. The balance calibrations are as follows:

1. Full-rated loads, normal orientation
2. Half-rated loads, normal orientation
3. Half-rated loads, balance rolled 90 degrees so that the side force elements were measuring normal force

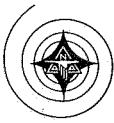

The balance orientation and calibration used for any group are indicated on the tabulated data.

PRESSURE MEASUREMENT

The balance chamber pressure was measured and is tabulated with the force data. The balance-force data were corrected using this cavity pressure. The force correction, the corrected force, and the uncorrected force are tabulated in Appendix A.

DATA ACCURACY

Three balance calibrations were used during the test for the A-11 balance and one calibration for the B-6 balance. The accuracy of the balances was stated by AEDC to be within ± 0.2 percent of the maximum rated output for each of the six components of the balance. Using these accuracies, a machining accuracy of 0.001 inch and stated accuracies on the Mach number and the total pressure, the maximum possible error was calculated for each coefficient and balance calibration. These errors were calculated using a total differential method and are presented in the following listing.

Balance	Balance Calibration*	dC_N	dC_A	dC_{mcg}	dC_L	dC_D	dC_{mA}
